Package 'RInside'

July 21, 2025

Title C++ Classes to Embed R in C++ (and C) Applications

Version 0.2.19

Date 2025-04-22

Description C++ classes to embed R in C++ (and C) applications
A C++ class providing the R interpreter is offered by this package
making it easier to have ``R inside'' your C++ application. As R itself
is embedded into your application, a shared library build of R is
required. This works on Linux, OS X and even on Windows provided you
use the same tools used to build R itself. Numerous examples are
provided in the nine subdirectories of the examples/ directory of
the installed package: standard, 'mpi' (for parallel computing), 'qt'
(showing how to embed 'RInside' inside a Qt GUI application), 'wt'
(showing how to build a ``web-application'' using the Wt toolkit),
'armadillo' (for 'RInside' use with 'RcppArmadillo'), 'eigen' (for
'RInside' use with 'RcppEigen'), and 'c_interface' for a basic C
interface and 'Ruby' illustration. The examples use 'GNUmakefile(s)'
with GNU extensions, so a GNU make is required (and will use the
'GNUmakefile' automatically). 'Doxygen'-generated documentation of
the C++ classes is available at the 'RInside' website as well.

RInside-package   *Embedding R in C++ applications*

Description

The **RInside** package makes it easier to embed R in your C++ applications. There is no code you would execute directly from the R environment. Rather, you write C++ programs that embed R which is illustrated by some the included examples.
