

Package ‘accrual’

July 22, 2025

Type Package

Title Bayesian Accrual Prediction

Version 1.4

Date 2023-11-23

Maintainer Junhao Liu <liujunhao2008@gmail.com>

Depends R(>= 3.1.3), tcltk2

Imports fgui, SMPracticals

Description Participant recruitment for medical research is challenging. Slow accrual leads to delays in research. Accrual monitoring during the process of recruitment is critical. Researchers need reliable tools to manage the accrual rate. We developed a Bayesian method that integrates the researcher's experience with previous trials and data from the current study, providing reliable predictions on accrual rate for clinical studies. For more details and background on these methodologies, see the publications of Byron, Stephen and Susan (2008) <[doi:10.1002/sim.3128](https://doi.org/10.1002/sim.3128)>, and Yu et al. (2015) <[doi:10.1002/sim.6359](https://doi.org/10.1002/sim.6359)>. In this R package, Bayesian accrual prediction functions are presented, which can be easily used by statisticians and clinical researchers.

accrual-package	<i>Bayesian Accrual Prediction</i>
-----------------	------------------------------------

Description

Participant recruitment for medical research is challenging. Slow accrual leads to delays in research. Accrual monitoring during the process of recruitment is critical. Researchers need reliable tools to manage the accrual rate. We developed a Bayesian method that integrates the researcher’s experience with previous trials and data from the current study, providing reliable predictions on accrual rate for clinical studies. In this R package, we present functions for Bayesian accrual prediction which can be easily used by statisticians and clinical researchers.

Details

Package: accrual
Type: Package
Version: 1.4
Date: 2023-11-23
License: GPL-2

There are major eight functions in the package. The accrual.gui function provides the gui version.

Examples

```
accrual.n.inform(n=300, T=36, P=0.5, m=100, tm=10, Tp=36)
accrual.n.plot(n=300, T=36, P=0.5, m=100, tm=10, Tp=36, Method="Informative Prior")
accrual.T.plot(n=300, T=36, P=0.5, m=100, tm=10, np=300, Method="Informative Prior")
accrual.gui()
```

accrual.data	<i>Example Accrual Data</i>
--------------	-----------------------------

Description

An accrual dataset example.

Usage

```
accrual.data
```

Examples

```
str(accrual.data)
plot(accrual.data)
accrual.plots(accrual.data)
```

accrual.gui	<i>GUI Version of Bayesian Accrual Prediction</i>
-------------	---

Description

The Graphical User Interface (GUI) needs the information from the original design of protocol (e.g., total enrollment time proposed and total participants proposed) and the ongoing accrual data (e.g., enrollment time since start and number of participants enrolled). The Bayesian prediction model is implemented in the background of calculation.

Usage

```
accrual.gui()
```

Arguments

There are no arguments for this function.

Value

A list of prediction on number of participants that recruited in a fixed time frame or on time frame that needed for reaching a certain number of participants. A Single-center or Multi-center selection is available for number of participants prediction.

Author(s)

Junhao Liu, Yu Jiang, Cen Wu, Steve Simon, Matthew S. Mayo, Rama Raghavan, Byron J. Gajewski

Examples

```
accrual.gui()
```

accrual.multi.n	<i>Prediction of Multi-center Accrual with Informative Prior in Fixed Time Frame</i>
-----------------	--

Description

Produce an output for prediction of the number of total participants will be recruited in a fixed time frame with Informative Prior for a multi-center trial.

Usage

```
accrual.multi.n(n, TT, P, J, Tm, Tsj, m, Tpred, all)
```

Arguments

n	Target sample size
TT	Target completion time
P	The prior certainty, range 0-1
J	The number of sites
Tm	Time to date
Tsj	The start date for each site
m	Sample observed to date for each site
Tpred	The specific time that want to predict the recruitment
all	Using all the sites (True/False)

Value

For a multi-center trial, a list of prediction on the number of total participants that will be recruited in a fixed time frame with Informative Prior.

Author(s)

Junhao Liu, Yu Jiang, Cen Wu, Steve Simon, Matthew S. Mayo, Rama Raghavan, Byron J. Gajewski

Examples

```
accrual.multi.n(n=300, TT=36, P=0.5, J=10, Tm=10, Tsj=c(0, 0, 0, 0, 0, 0, 0, 0, 0, 0),
m=c(9, 10, 10, 10, 11, 11, 11, 12, 12, 12), Tp=36, all=TRUE)[[1]]
```

accrual.n.hedging

Prediction of Accrual with Hedging Prior in Fixed Time Frame

Description

Produce an output for prediction of the number of participants will be recruited in a fixed time frame with Hedging Prior.

Usage

```
accrual.n.hedging(n, TT, m, tm, Tp)
```

Arguments

n	Target sample size
TT	Target completion time
m	Sample observed to date
tm	Time to date
Tp	The specific time that want to predict the recruitment

Value

A list of prediction on the number of participants that will be recruited in a fixed time frame with Hedging Prior.

Author(s)

Junhao Liu, Yu Jiang, Cen Wu, Steve Simon, Matthew S. Mayo, Rama Raghavan, Byron J. Gajewski

Examples

```
accrual.n.hedging(n=300, TT=36, m=100, tm=10, Tp=36)[[1]]
```

accrual.n.inform

Prediction of Accrual with Informative Prior in Fixed Time Frame

Description

Produce an output for prediction of the number of participants can be recruited in a fixed time frame with Informative Prior.

Usage

```
accrual.n.inform(n, TT, P, m, tm, Tp)
```

Arguments

n	Target sample size
TT	Target completion time
P	The prior certainty, range 0-1
m	Sample observed to date
tm	Time to date
Tp	The specific time that want to predict the recruitment

Value

A list of prediction on the number of participants that will be recruited in a fixed time frame with Informative Prior.

Author(s)

Junhao Liu, Yu Jiang, Cen Wu, Steve Simon, Matthew S. Mayo, Rama Raghavan, Byron J. Gajewski

Examples

```
accrual.n.inform(n=300, TT=36, P=0.5, m=100, tm=10, Tp=36)[[1]]
```

accrual.n.plot

Plot for Prediction of Accrual in Fixed Time Frame

Description

Produce a plot and output for prediction of the number of participants will be recruited in a fixed time frame.

Usage

```
accrual.n.plot(n, TT, P, m, tm, Tp, Method)
```

Arguments

n	Target sample size
TT	Target completion time
P	The prior certainty, range 0-1; For Accelerated Prior, $P = 1-m/n$
m	Sample observed to date
tm	Time to date
Tp	The specific time that want to predict the recruitment
Method	Informative Prior, Accelerated Prior, Hedging Prior

Value

A list of prediction and corresponding plot on the number of participants that will be recruited in a fixed time frame.

Author(s)

Junhao Liu, Yu Jiang, Cen Wu, Steve Simon, Matthew S. Mayo, Rama Raghavan, Byron J. Gajewski

Examples

```
accrual.n.plot(n=300, TT=36, P=0.5, m=100, tm=10, Tp=36, Method="Informative Prior")
accrual.n.plot(n=300, TT=36, m=100, tm=10, Tp=36, Method="Accelerated Prior")
accrual.n.plot(n=300, TT=36, m=100, tm=10, Tp=36, Method="Hedging Prior")
```

```
accrual.plot.multicenter
```

Plot for Prediction of Multi-center Accrual in Fixed Time Frame

Description

Produce a plot and output for prediction of the number of total participants for a multi-center trial will be recruited in a fixed time frame.

Usage

```
accrual.plot.multicenter(n,TT,P,J,Tm,Tsj,m,all)
```

Arguments

n	Target sample size
TT	Target completion time
P	The prior certainty, range 0-1
J	The number of sites
Tm	Time to date
Tsj	The start date for each site
m	Sample observed to date for each site
all	Using all the sites (True/False)

Value

For a multi-center trial, a list of prediction and corresponding plot on the number of total participants that will be recruited in a fixed time frame.

Author(s)

Junhao Liu, Yu Jiang, Cen Wu, Steve Simon, Matthew S. Mayo, Rama Raghavan, Byron J. Gajewski

Examples

```
accrual.plot.multicenter(n=300,TT=36,P=0.5,J=10,Tm=10,Tsj=c(0,0,0,0,0,0,0,0,0,0),
m=c(9,10,10,10,11,11,11,12,12,12),all=TRUE)
```

accrual.plots

Diagnostic Plots

Description

The diagnostic panel shows four figures that help to understand the data distribution. The top-left figure is the exponential quantile plot, which checks whether the distribution of waiting times is exponential. The top-right figure is the histogram of the waiting times, with the red line is the theoretical exponential distribution. The figure of waiting time verse cumulative accrual time is shown on the bottom left. The figure of total accrual verse cumulative accrual time is shown on the bottom right.

Usage

```
accrual.plots(w)
```

Arguments

w The accrual or waiting time dataset

Value

A set of figures on showing the data distribution of waiting time.

Author(s)

Junhao Liu, Yu Jiang, Cen Wu, Steve Simon, Matthew S. Mayo, Rama Raghavan, Byron J. Gajewski

Examples

```
accrual.plots(accrual.data)
```

accrual.T.hedging	<i>Prediction of Time with Hedging Prior</i>
-------------------	--

Description

Prediction of time frame with Hedging Prior for a certain number of participants.

Usage

```
accrual.T.hedging(n, TT, m, tm, np)
```

Arguments

n	Target sample size
TT	Target completion time
m	Sample observed to date
tm	Time to date
np	The specific number of participants want to be predicted

Value

A list of prediction on time frame that needed for reaching a certain number of participants with Hedging Prior.

Author(s)

Junhao Liu, Yu Jiang, Cen Wu, Steve Simon, Matthew S. Mayo, Rama Raghavan, Byron J. Gajewski

Examples

```
accrual.T.hedging(n=300, TT=36, m=100, tm=10, np=300)[[1]]
```

accrual.T.inform	<i>Prediction of Time with Informative Prior</i>
------------------	--

Description

Prediction of time frame with Informative Prior for a certain number of participants.

Usage

```
accrual.T.inform(n, TT, P, m, tm, np)
```

Arguments

n	Target sample size
TT	Target completion time
P	The prior certainty, range 0-1
m	Sample observed to date
tm	Time to date
np	The specific number of participants want to be predicted

Value

A list of prediction on time frame that needed for reaching a certain number of participants with Informative Prior.

Author(s)

Junhao Liu, Yu Jiang, Cen Wu, Steve Simon, Matthew S. Mayo, Rama Raghavan, Byron J. Gajewski

Examples

```
accrual.T.inform(n=300, TT=36, P=0.5, m=100, tm=10, np=300)[[1]]
```

accrual.T.plot	<i>Plot for Prediction of Time</i>
----------------	------------------------------------

Description

Produce a plot and output for prediction of time frame for a certain number of participants.

Usage

```
accrual.T.plot(n, TT, P, m, tm, np, Method)
```

Arguments

n	Target sample size
TT	Target completion time
P	The prior certainty, range 0-1; For Accelerated Prior, $P = 1 - m/n$
m	Sample observed to date
tm	Time to date
np	The specific number of participants want to be predicted
Method	Informative Prior, Accelerated Prior, Hedging Prior

Value

A list of prediction and corresponding plot on time frame that needed for reaching a certain number of participants.

Author(s)

Junhao Liu, Yu Jiang, Cen Wu, Steve Simon, Matthew S. Mayo, Rama Raghavan, Byron J. Gajewski

Examples

```
accrual.T.plot(n=300, TT=36, P=0.5, m=100, tm=10, np=300, Method="Informative Prior")
accrual.T.plot(n=300, TT=36, m=100, tm=10, np=300, Method="Accelerated Prior")
accrual.T.plot(n=300, TT=36, m=100, tm=10, np=300, Method="Hedging Prior")
```
