

Package ‘childsds’

July 22, 2025

Title Data and Methods Around Reference Values in Pediatrics

Version 0.9.11

Description Calculation of standard deviation scores and percentiles adduced from different standards (WHO, UK, Germany, Italy, China, etc). Also, references for laboratory values in children and adults are available, e.g., serum lipids, iron-related blood parameters, IGF, liver enzymes. See package documentation for full list.

Depends R (>= 4.2.0)

Imports gamlss, gamlss.dist, dplyr, magrittr, methods, tidyr, tidyselect, boot, class, tibble, reshape2, purrr, purrrlyr, utils, VGAM, interp, lubridate, ggplot2, scales, DescTools, colorspace, rlang

Suggests knitr, rmarkdown

VignetteBuilder knitr

adjust_colors	<i>change saturation and brightness of given colors</i>
---------------	---

Description

change saturation and brightness of given colors

Usage

adjust_colors(colors, saturation_factor = 1, brightness_factor = 1)

Arguments

colors vector of hex colors

saturation_factor

 factor

brightness_factor

 factor

Value

vector of adjusted colors

Author(s)

Mandy Vogel

aga_15.ref	<i>Parameters from recommendations of the German Adiposity Association (2015, AGA)</i>
------------	--

Description

Parameters from recommendations of the German Adiposity Association (2015, AGA)

Usage

aga_15.ref

Source

"Kromeyer-Hauschild K, Moss A, Wabitsch M. Referenzwerte fuer den Body-Mass-Index fuer Kinder, Jugendliche und Erwachsene in Deutschland. Adipositas - Ursachen, Folgeerkrankungen, Therapie. 2015;09(3):123-7."

aggregate_lms	<i>aggregate lms parameters</i>
---------------	---------------------------------

Description

aggregate lms parameters

Usage

aggregate_lms(lms.list)

Arguments

lms.list list of parameter tables as returned by do_iterations()

Details

function takes the lms part of the result from the do_iterations() function and returns the mean parameters

Value

list of dataframes containing the aggregated parameters, each for every level of sex

Author(s)

Mandy Vogel

belgium.ref	<i>Parameters derived from Flandern population</i>
-------------	--

Description

Parameters derived from Flandern population

Usage

belgium.ref

Source

Roelants M, Hauspie R, Hoppenbrouwers K. References for growth and pubertal development from birth to 21 years in Flanders, Belgium. *Annals of Human Biology*. 2009 Dezember;36(6):680-94.

bone.ref	<i>Parameters for different bone parameters</i>
----------	---

Description

Parameters for different bone parameters

Usage

bone.ref

Source

Geserick M, Vogel M, Eckelt F, et al. Children and adolescents with obesity have reduced serum bone turnover markers and 25-hydroxyvitamin D but increased parathyroid hormone concentrations – Results derived from new pediatric reference ranges. *Bone* 2020;132:115124 and Eberle et al. unpublishedfor VitD binding protein

bp_wuehl_age.ref	<i>Parameters from Wuehl et al. blood pressure reference values Germany according to age, from version 0.7.3 unplausable values are replaced by interpolated ones. For the original values check out earlier versions</i>
------------------	---

Description

Parameters from Wuehl et al. blood pressure reference values Germany according to age, from version 0.7.3 unplausable values are replaced by interpolated ones. For the original values check out earlier versions

Usage

bp_wuehl_age.ref

Source

"Wuehl E, Witte K, Soergel M, Mehls O, Schaefer F, Hypertension for the GWG on P. Distribution of 24-h ambulatory blood pressure in children: normalized reference values and role of body dimensions. Journal of Hypertension. 2002 Oct;20(10):1995.", implausible values were replaced by interpolated ones from package version 0.7.4

bp_wuehl_height.ref	<i>Parameters from Wuehl et al. blood pressure reference values Germany according to height from version 0.7.3 unplausable values are replaced by interpolated ones. For the original values check out earlier versions</i>
---------------------	---

Description

Parameters from Wuehl et al. blood pressure reference values Germany according to height from version 0.7.3 unplausable values are replaced by interpolated ones. For the original values check out earlier versions

Usage

bp_wuehl_height.ref

Source

"Wuehl E, Witte K, Soergel M, Mehls O, Schaefer F, Hypertension for the GWG on P. Distribution of 24-h ambulatory blood pressure in children: normalized reference values and role of body dimensions. Journal of Hypertension. 2002 Oct;20(10):1995.", implausible values were replaced by interpolated ones from package version 0.7.4

calc_confints	<i>Calculate confidence intervals</i>
---------------	---------------------------------------

Description

Calculate confidence intervals

Usage

```
calc_confints(  
  lms.list,  
  perc = c(2.5, 5, 50, 95, 97.5),  
  level = 0.95,  
  type = c("point")  
)
```

Arguments

<code>lms.list</code>	lms part of the returned list of do_iterations
<code>perc</code>	percentiles for which the confidence bands are calculated
<code>level</code>	confidence level
<code>type</code>	for now only point is a valid value

Details

The function takes a lms list as returned by [do_iterations](#) and calculates the confidence bands for a given set of percentiles using [envelope](#) from the boot package

Value

list containing the respective confidence envelopes

Author(s)

mandy

calc_percent_excess	<i>Calculate percentage relative to a given base percentile</i>
---------------------	---

Description

Calculate percentage relative to a given base percentile

Usage

```
calc_percent_excess(  
  bmi = NULL,  
  age = NULL,  
  sex = NULL,  
  ref.perc = 50,  
  ref,  
  item = "bmi",  
  rownr = NULL  
)
```

Arguments

bmi	vector of bmi
age	vector of age
sex	vector of sex (coding "male" and "female") is assumend
ref.perc	single value: reference percentile (0,100)
ref	RefGroup object
item	item within ref
rownr	indicator of order

Details

The function calculates the percentage of a given bmi value relative to a specific percentile

Value

vector containing values between 0 and 1

Author(s)

doyon_age.ref	<i>Parameters for different carotid artery intima-media thickness and distensibility dependent on age</i>
---------------	---

Description

Parameters for different carotid artery intima-media thickness and distensibility dependent on age

Usage

doyon_age.ref

Source

"Doyon A, Kracht D, Bayazit AK, et al. Carotid artery intima-media thickness and distensibility in children and adolescents: reference values and role of body dimensions. Hypertension 2013;62(3):550-6"

doyon_height.ref	<i>Parameters for different carotid artery intima-media thickness and distensibility dependent on height</i>
------------------	--

Description

Parameters for different carotid artery intima-media thickness and distensibility dependent on height

Usage

doyon_height.ref

Source

"Doyon A, Kracht D, Bayazit AK, et al. Carotid artery intima-media thickness and distensibility in children and adolescents: reference values and role of body dimensions. Hypertension 2013;62(3):550-6"

do_iterations	<i>do lms iterations</i>
---------------	--------------------------

Description

Do lms iterations

Usage

```
do_iterations(
  data.list,
  n = 10,
  max.it = 1000,
  method = "gamlss",
  prop.fam = 0.75,
  prop.subject = 1,
  age.min = 0,
  age.max = 18,
  age.int = 1/12,
  x2.min = 25,
  x2.max = 42,
  x2.int = 1/12,
  keep.models = F,
  dist = "BCCGo",
  mu.df = 4,
  sigma.df = 3,
  nu.df = 2,
  tau.df = 2,
  verbose = F,
  formula = NULL,
  sigma.formula = ~1,
  nu.formula = ~1,
  tau.formula = ~1,
  method.pb = "ML",
  trans.x = F,
  lim.trans = c(0, 1.5)
)
```

Arguments

data.list	list of dataframes as returned by prepare_data
n	number of desired fits
max.it	maximum number of iterations that will be run
method	use vgam or gamlss
prop.fam	proportion of families to be sampled
prop.subject	proportion of subject to be sampled

<code>age.min</code>	lower bound of age
<code>age.max</code>	upper bound of age
<code>age.int</code>	stepwidth of the age variable
<code>x2.min</code>	minimum limit for the second predictor
<code>x2.max</code>	maximum limit for the second predictor
<code>x2.int</code>	interval length between knots saved
<code>keep.models</code>	indicator whether or not models in each iteration should be kept
<code>dist</code>	distribution used for the fitting process, has to be one of BCCGo, BCPEo, BCTo as they are accepted by lms()
<code>mu.df</code>	degree of freedom location parameter
<code>sigma.df</code>	degree of freedom spread parameter
<code>nu.df</code>	degree of freedom skewness parameter
<code>tau.df</code>	degree of freedom kurtosis parameter
<code>verbose</code>	whether or not information about sampling will be printed during while iterate
<code>formula</code>	formula for the location parameter
<code>sigma.formula</code>	formula for the sigma parameter
<code>nu.formula</code>	formula for the nu parameter
<code>tau.formula</code>	formula for the tau parameter
<code>method.pb</code>	GAIC or ML
<code>trans.x</code>	indicator wether age should be transformed or not
<code>lim.trans</code>	limits for the exponent of transformation of age

Details

function samples families, samples measurements (and subjects), fits the model for a given number of iterations

Value

list of lists for models and fitted parameters

Author(s)

Mandy Vogel

dummy.refs

dummy

Description

dummy function to call a function of the gamlss.dist package

Usage

```
dummy.refs(ref, item)
```

Arguments

ref	reference object
item	item name specifying the reference

Details

dummy function to call a function of the gamlss.dist package

Value

dummy output

Author(s)

Mandy Vogel

duran_bf.ref

Parameters for bodyfat (for Whites, Blacks, and Mexican-Americans

Description

Parameters for bodyfat (for Whites, Blacks, and Mexican-Americans

Usage

```
duran_bf.ref
```

Source

"Duran I, Martakis K, Rehberg M, Stark C, Schafmeyer L, Schoenau E. Reference Centiles for the Evaluation of Nutritional Status in Children using Body Fat Percentage, Fat Mass and Lean Body Mass Index. ethiop.ref	<i>Parameters derived Ethiopian children</i>
------------	--

Description

Parameters derived Ethiopian children

Usage

ethiop.ref

Source

Amare, E. B. et al. Reference Ranges for Head Circumference in Ethiopian Children 0–2 Years of Age. World Neurosurgery 84, 1566–1571.e2 (2015).

fit_gamlss	<i>fit lms</i>
------------	----------------

Description

fit_gamlss

Usage

```
fit_gamlss(  
  data,  
  age.min = 0.25,  
  age.max = 18,  
  age.int = 1/12,  
  keep.models = F,  
  dist = "BCCGo",  
  mu.df = 4,  
  sigma.df = 3,  
  nu.df = 2,  
  tau.df = 2,  
  trans.x = F,  
  lim.trans = c(0, 1.5),  
  value,  
  tmpdata  
)
```

Arguments

data	dataframe as return by select_meas()
age.min	lower bound of age
age.max	upper bound of age
age.int	stepwidth of the age variable
keep.models	indicator whether or not models in each iteration should be kept
dist	distribution used for the fitting process, has to be one of BCCGo, BCPEo, BCTo as they are accepted by lms()
mu.df	degree of freedom location parameter
sigma.df	degree of freedom spread parameter
nu.df	degree of freedom skewness parameter
tau.df	degree of freedom kurtosis parameter
trans.x	indicator wether age should be transformed or not
lim.trans	limits for the exponent of transformation of age
value	names of the value variable (character) if different from value, ignored
tmpdata	ignored

Details

wrapper around the [lms](#) function in the gamlss package returns the fitted lms-parameter at given age points the function is called inside [do_iterations](#) and may not called directly

Value

list containing a dataframe of the fitted lms parameter at the given age points and the fitted model

Author(s)

Mandy Vogel

fit_gamlss1

fit_gamlss1

Description

fit_gamlss1

Usage

```
fit_gamlss1(
  data,
  age.min = 0,
  age.max = 80,
  age.int = 1/12,
  keep.models = F,
  dist = "BCCGo",
  formula = NULL,
  sigma.formula = ~1,
  nu.formula = ~1,
  tau.formula = ~1,
  method.pb = "ML"
)
```

Arguments

data	dataframe as return by select_meas()
age.min	lower bound of age
age.max	upper bound of age
age.int	stepwidth of the age variable
keep.models	indicator whether or not models in each iteration should be kept
dist	distribution used for the fitting process, has to be one of BCCGo, BCPEo, BCTo as they are accepted by lms()
formula	formula for the location parameter
sigma.formula	formula for the sigma parameter
nu.formula	formula for the nu parameter
tau.formula	formula for the tau parameter
method.pb	GAIC or ML

Details

wrapper around the [gamlss](#) function from the gamlss package returns the fitted lms-parameter at given age points the function is called inside [do_iterations](#) and may not be called directly

Value

list containing a dataframe of the fitted lms parameter at the given age points and the fitted model

Author(s)

Mandy Vogel

fit_gamlss_2d	<i>fit_gamlss_2d</i>
---------------	----------------------

Description

fit_gamlss 2dim

Usage

```
fit_gamlss_2d(
  data,
  age.min = 0,
  age.max = 80,
  age.int = 1/12,
  x2.min = 25,
  x2.max = 42,
  x2.int = 1,
  keep.models = F,
  dist = "BCCGo",
  formula = NULL,
  sigma.formula = ~1,
  nu.formula = ~1,
  tau.formula = ~1,
  method.pb = "ML"
)
```

Arguments

data	dataframe as return by select_meas()
age.min	lower bound of age
age.max	upper bound of age
age.int	stepwidth of the age variable
x2.min	minimum limit for the second predictor
x2.max	maximum limit for the second predictor
x2.int	interval length between knots saved
keep.models	indicator whether or not models in each iteration should be kept
dist	distribution used for the fitting process, has to be one of BCCGo, BCPEo, BCTo as they are accepted by lms()
formula	formula for the location parameter
sigma.formula	formula for the sigma parameter
nu.formula	formula for the nu parameter
tau.formula	formula for the tau parameter
method.pb	GAIC or ML

Details

wrapper around the `gamlss` function from the `gamlss` package returns the fitted lms-parameter at given age points the function is called inside `do_iterations` and may not be called directly

Value

list containing a dataframe of the fitted lms parameter at the given age points and the fitted model

Author(s)

Mandy Vogel

<code>fit_vgam</code>	<i>fit lms parameters via VGAM</i>
-----------------------	------------------------------------

Description

fit vgam

Usage

```
fit_vgam(
  data,
  age.min = 0.25,
  age.max = 18,
  age.int = 1/12,
  keep.models = F,
  dist = "BCN",
  mu.df = 4,
  sigma.df = 3,
  nu.df = 2,
  value
)
```

Arguments

<code>data</code>	dataframe as return by <code>select_meas()</code>
<code>age.min</code>	lower bound of age
<code>age.max</code>	upper bound of age
<code>age.int</code>	stepwidth of the age variable
<code>keep.models</code>	indicator whether or not models in each iteration should be kept
<code>dist</code>	distribution used for the fitting process, has to be one of BCCGo, BCPEo, BCTo as they are accepted by <code>lms()</code>
<code>mu.df</code>	degree of freedom location parameter
<code>sigma.df</code>	degree of freedom spread parameter
<code>nu.df</code>	degree of freedom skewness parameter
<code>value</code>	names of the value variable (character) if different from <code>value</code> , ignored

Details

wrapper around the [vgam](#) function in the VGAM package returns the fitted lms-parameter at given age points the function is called inside [do_iterations](#) and may not called directly

Value

list containing a dataframe of the fitted lms parameter at the given age points and the fitted model

lipids.ref	<i>Parameters for serum lipids in children</i>
------------	--

Description

Parameters for serum lipids in children

Usage

```
lipids.ref
```

Source

Dathan-Stumpf, A. et al. Pediatric reference data of serum lipids and prevalence of dyslipidemia: Results from a population-based cohort in Germany. *Clinical Biochemistry* 49, 740–749 (2016). In addition non-hdl references are provided. Publication in progress (Maidowski et al).

make_percentile_tab	<i>calculate raw values</i>
---------------------	-----------------------------

Description

Calculate raw values for percentile curve

Usage

```
make_percentile_tab(
  ref,
  item,
  perc = c(2.5, 5, 50, 95, 97.5),
  stack = F,
  age = NULL,
  include.pars = T,
  digits = 4,
  sex
)
```

Arguments

ref	Refgroup object
item	name of the measurement item
perc	vector of percentiles to be calculated
stack	wether or not the data should be stacked, stacked data would most possibly be used in ggplot2

age	desired values of age
include.pars	indicator whether or not parameters should be included
digits	specification of number of decimal places
sex	name of the sex variable (character) if different from sex, not functional in this version and therefore ignored

Details

calculates quantile values for given RefGroup and given percentiles

Value

data frame either with the different percentiles as columns or, if stacked, as data frame with four columns: age, sex, variable, value

Author(s)

Mandy Vogel

Examples

```
ptab <- make_percentile_tab(ref = kro.ref,
                           item = "height",
                           perc = c(2.5,10,50,90,97.5),
                           stack = TRUE)

ggplot2::ggplot(ptab, ggplot2::aes(x = age, y = value, colour = variable)) +
  ggplot2::geom_line() +
  ggplot2::facet_wrap(~ sex, nrow = 2)
```

make_percentile_tab2d *calculate raw values*

Description

Calculate raw values for percentile curve

Usage

```
make_percentile_tab2d(
  ref,
  item,
  perc = c(2.5, 5, 50, 95, 97.5),
  stack = F,
  age = NULL,
  x2 = NULL,
  include.pars = T,
  digits = 4,
  sex
)
```

Arguments

ref	Refgroup object
item	name of the measurement item
perc	vector of percentiles to be calculated
stack	wether or not the data should be stacked, stacked data would most possibly be used in ggplot2
age	desired values of age
x2	desired values of second covariate
include.pars	indicator whether or not parameters should be included
digits	specification of number of decimal places
sex	name of the sex variable (character) if different from sex, not functional in this version and therefore ignored

Details

calculates quantile values for given RefGroup and given percentiles

Value

data frame either with the different percentiles as columns or, if stacked, as data frame with four columns: age, sex, variable, value

Author(s)

Mandy Vogel

Examples

```
ptab <- make_percentile_tab(ref = kro.ref,
                           item = "height",
                           perc = c(2.5,10,50,90,97.5),
                           stack = TRUE)

ggplot2::ggplot(ptab, ggplot2::aes(x = age, y = value, colour = variable)) +
  ggplot2::geom_line() +
  ggplot2::facet_wrap(~ sex, nrow = 2)
```

mean_ridits

mean ridits for vectors of paired observations

Description

mean ridits for vectors of paired observations

Usage

```
mean_ridits(v, w, maxrank = max(v), minrank = NULL)
```

Arguments

v	vector 1
w	vector 2
maxrank	max possible rank
minrank	min possible rank

Value

2-element named vector

Author(s)

Mandy Vogel

metabolom.ref	<i>Parameters for different metabolom parameters from the LIFE Child cohort</i>
---------------	---

Description

Parameters for different metabolom parameters from the LIFE Child cohort

Usage

```
metabolom.ref
```

Source

"Hirschel, J., Vogel, M., Baber, R., Garten, A., Beuchel, C., Dietz, Y., Dittrich, J., Körner, A., Kiess, W., & Ceglarek, U. (2020). Relation of Whole Blood Amino Acid and Acylcarnitine Metabolome to Age, Sex, BMI, Puberty, and Metabolic Markers in Children and Adolescents. *Metabolites*, 10(4), 149. <https://doi.org/10.3390/metabo10040149>"

mid.mean.ranks	<i>calculate mid mean ranks</i>
----------------	---------------------------------

Description

calculate mid mean ranks

Usage

```
mid.mean.ranks(  
  v1,  
  v2,  
  maxrank = max(c(v2, v1)),  
  minrank = NULL,  
  conf.level = 0.05  
)
```

Arguments

- v1 vector of ranks
- v2 vector of ranks
- maxrank max possible rank
- minrank min possible rank
- conf.level confidence level alpha

Value

list of marginal mean ranks and mid ranks

Author(s)

Mandy Vogel

mock_df	<i>Mock a data frame</i>
---------	--------------------------

Description

mock values for a given reference

Usage

```
mock_df(ref, item, n = 1000)
```

Arguments

- ref a valid RefGroup object
- item a valid item present in ref
- n how many values should be created

Details

mock values for a given reference

Value

data frame containing a age, sex, and value column

Author(s)

mandy

mock_value	<i>Mock Value</i>
------------	-------------------

Description

mock a value for a given reference

Usage

mock_value(ref, item, sex = c("male", "female"), age)

Arguments

- ref a valid RefGroup object
- item a valid item present in ref
- sex character male or female
- age numeric age value

Details

the function creates a random value for a given age and sex value and a given reference

Value

a random value from the conditional distribution (conditionally on age and sex)

Author(s)

mandy

mock_values

Mock Values

Description

mock values for a given reference, given age and given sex

Usage

```
mock_values(df, sex, age, ref, item)
```

Arguments

df	data frame containing the age and sex
sex	name of the sex variable
age	name of the age variable
ref	a valid RefGroup object
item	a valid item present in ref

Details

the function creates random values for given age and sex values and a given reference

Value

data frame containing the additional column with random numbers

one_iteration	<i>one iteration</i>
---------------	----------------------

Description

one iteration

Usage

```
one_iteration(  
  data.list,  
  method,  
  prop.fam = 0.75,  
  prop.subject = 1,  
  age.min = 0,  
  age.max = 18,  
  age.int = 1/12,  
  x2.min = 25,  
  x2.max = 42,  
  x2.int = 1/12,  
  keep.models = F,  
  dist = "BCCGo",  
  formula = NULL,  
  sigma.df = 3,  
  nu.df = 2,  
  mu.df = 4,  
  tau.df = 2,  
  sigma.formula = ~1,  
  nu.formula = ~1,  
  tau.formula = ~1,  
  verbose = F,  
  trans.x = F,  
  lim.trans = c(0, 1.5),  
  method.pb = "ML"  
)
```

Arguments

data.list	list of dataframes as returned by prepare_data
method	use vgam or gamlss
prop.fam	proportion of families to be sampled
prop.subject	proportion of subject to be sampled
age.min	lower bound of age
age.max	upper bound of age
age.int	stepwidth of the age variable

x2.min	minimum limit for the second predictor
x2.max	maximum limit for the second predictor
x2.int	interval length between knots saved
keep.models	indicator whether or not models in each iteration should be kept
dist	distribution used for the fitting process, has to be one of BCCGo, BCPEo, BCTo as they are accepted by lms()
formula	formula for the location parameter
sigma.df	degree of freedom spread parameter
nu.df	degree of freedom skewness parameter
mu.df	degree of freedom location parameter
tau.df	degree of freedom kurtosis parameter
sigma.formula	formula for the sigma parameter
nu.formula	formula for the nu parameter
tau.formula	formula for the tau parameter
verbose	whether or not information about sampling will be printed during while iterate
trans.x	indicator wether age should be transformed or not
lim.trans	limits for the exponent of transformation of age
method.pb	GAIC or ML

Details

function samples families then measurements and fits the model the function is called inside [do_iterations](#) and may not called directly

Value

list of lists each containing a dataframe of the fitted lms parameter at the given age points and the fitted model

Author(s)

Mandy Vogel

ParTab-class	<i>Table of references</i>
--------------	----------------------------

Description

Reference tables

Slots

- item identifier of the item
- dist named list which contains the distribution which was used in fitting the references. One entry for male and one for female

portug.ref	<i>Parameters derived from Portuguese children</i>
------------	--

Description

Parameters derived from Portuguese children

Usage

portug.ref

Source

Chaves, R., Baxter-Jones, A., Souza, M., Santos, D. & Maia, J. Height, weight, body composition, and waist circumference references for 7-to 17-year-old children from rural Portugal. HOMO- Journal of Comparative Human Biology 66, 264–277 (2015).

prepare_data	<i>prepare data for iteration process</i>
--------------	---

Description

prepare data for repeated iteration process

Usage

```
prepare_data(  
  data,  
  group = NULL,  
  subject = "SIC",  
  sex = NULL,  
  value = "value",  
  age = "age",  
  x2 = "x2",  
  lb = -Inf,  
  ub = Inf  
)
```

Arguments

data	dataframe containing measurement values, age, sex, and subject identifier
group	optional variable indicating groups of subjects within the data frame in most cases (families)
subject	subject identifier

sex	column containing the sex (or any other stratum), ideally of type character, iteration process will run on each of the levels separately
value	numeric column containing the measurement values
age	numeric column containing the age
x2	numeric column containing a second covariate
lb	optional - lower bound for age
ub	optional - upper bound for age

Details

given a dataframe, the column name of the subject identifier, sex, age, value and group columns, the function creates a dataframe containing only these five columns with the standard column names group, subject, sex, age, value. lines containing missing values are removed.

Value

list of dataframes containing the columns group, subject, sex, age, value; one dataframe for every level of sex

props	<i>propabilities</i>
-------	----------------------

Description

propabilities

Usage

```
props(v, maxrank = max(v), minrank = NULL)
```

Arguments

v	vector of ranks
maxrank	max possible rank
minrank	min possible rank

Value

1-dim contingency table

Author(s)

Mandy Vogel

prs_pal	<i>color palette Pediatric research</i>
---------	---

Description

color palette Pediatric research

Usage

```
prs_pal(pal = "orig", primary = "blue", other = "violet", direction = 1)
```

Arguments

pal	orig, sat or bright
primary	first colour for two-color scales, must be one of the scale colors
other	second colour for two-color scales
direction	if -1 one order of colours is reversed

Value

function of n

Author(s)

Mandy Vogel

RefGroup-class	<i>Class of references</i>
----------------	----------------------------

Description

Container for reference tables

Slots

- name name of the reference group
- refs List of references, each reference refers to one item and contains independent variable age, and the parameter values for both genders
- citations information about the sources of the references
- info additional infos regarding the references

Author(s)

Mandy Vogel

Examples

```
data(kiggs.ref)
print(kiggs.ref)
data(ukwho.ref)
print(ukwho.ref)
data(who.ref)
print(who.ref)
```

ridits.from.ranks	<i>ridits from ranks</i>
-------------------	--------------------------

Description

ridits from ranks

Usage

ridits.from.ranks(v, maxrank = max(v), minrank = NULL)

Arguments

v	vector of ranks
maxrank	min possible rank
minrank	max possible rank

Value

vector of ridits

Author(s)

Mandy Vogel

ripka_bf.ref	<i>Parameters for fat and lean mass from Ripka et al, 2020</i>
--------------	--

Description

Parameters for fat and lean mass from Ripka et al, 2020

Usage

ripka_bf.ref

Source

Ripka, W.L. et al. (2020) Lean mass reference curves in adolescents using dual-energy x-ray absorptiometry (DXA), PLOS ONE, 15(2), p. e0228646. doi:10.1371/journal.pone.0228646.

saudi.ref	<i>Parameters derived from Saudi children</i>
-----------	---

Parameters derived from Saudi children

Usage

saudi.ref

Source

Mouzan, M. I. E., Salloum, A. A. A., Alqurashi, M. M., Herbish, A. S. A. & Omar, A. A. The LMS and Z scale growth reference for Saudi school-age children and adolescents. Saudi Journal of Gastroenterology 22, 331 (2016)

Shaik, S.A., El Mouzan, M.I., AlSalloum, A.A., AlHerbish, A.S., 2016. Growth reference for Saudi preschool children: LMS parameters and percentiles. Ann Saudi Med 36, 2-6. doi:10.5144/0256-4947.2016.2

scale_colour_prs	<i>discrete ggplot colour scale of PRS colors</i>
------------------	---

Description

discrete ggplot colour scale

Usage

```
scale_colour_prs(  
  pal = "orig",  
  primary = "blue",  
  other = "violet",  
  direction = 1,  
  ...  
)
```

Arguments

pal	orig, sat, or bright
primary	primary colour of two
other	the other colour
direction	if -1 one order of colours is reversed
...	further argument

Value

colour scale for use with ggplot()

Author(s)

Mandy Vogel

scale_fill_prs	<i>discrete ggplot colour scale of PRS colors</i>
----------------	---

Description

discrete ggplot fill scale

Usage

```
scale_fill_prs(  
  pal = "orig",  
  primary = "blue",  
  other = "violet",  
  direction = 1,  
  ...  
)
```

Arguments

pal	orig, sat, or bright
primary	primary colour of two
other	the other colour
direction	if -1 one order of colours is reversed
...	further arguments

Value

colour scale for use with ggplot()

Author(s)

Mandy Vogel

scale_uchu	<i>uchu colour scale</i>
------------	--------------------------

Description

Uchu colour scale

Usage

```
scale_colour_uchu(  
  pal = c("gray", "red", "pink", "purple", "blue", "green", "yellow", "orange",  
    "general"),  
  ...  
)  
  
scale_fill_uchu(  
  pal = c("gray", "red", "pink", "purple", "blue", "green", "yellow", "orange",  
    "general"),  
  ...  
)
```

Arguments

pal	colour palette
...	further arguments to scale

Details

provides the uchu colour scale as ggplot2 colour scale (<https://github.com/NeverCease/uchu>)

Value

ggplot colour scale

Author(s)

Mandy Vogel

schafmeyer_leg.ref	<i>Parameters for bone mineral content/density, fm, lm (lower limbs) from Schafmeyer, 2022</i>
--------------------	--

Description

Parameters for bone mineral content/density, fm, lm (lower limbs) from Schafmeyer, 2022

Usage

schafmeyer_leg.ref

Source

Schafmeyer L, Linden T, Sill H, Rehberg M, Schoenau E, Duran I. Pediatric Reference Centiles of Bone Mineral Density and Body Composition of Lower Limbs. Journal of Clinical Densitometry. 2022 Jan;25(1):73–80.

sds	<i>Calculate SDS Values</i>
-----	-----------------------------

Description

Calculate SDS values

Usage

sds(value, age, sex, item, ref, type = "SDS", male = "male", female = "female")

Arguments

value	vector of measurement values
age	vector of age values
sex	vector of sex
item	name of the item e.g. "height"
ref	RefGroup object
type	"SDS" or "perc"
male	coding of sex for male
female	coding of sex for female

Details

The function takes a vector of measurement values, and of age and of sex and a RefGroup object as arguments. It calculates the sds or percentile values.

Value

vector containing SDS or percentile values

Author(s)

Mandy Vogel

Examples

```
anthro <- data.frame(age = c(11.61,12.49,9.5,10.42,8.42,10.75,9.57,10.48),
  height = c(148.2,154.4,141.6,145.3,146,140.9,145.5,150),
  sex = sample(c("male","female"), size = 8, replace = TRUE),
  weight = c(69.5,72.65,47.3,51.6,45.6,48.9,53.5,58.5))
anthro$height_sds <- sds(anthro$height,
  age = anthro$age,
  sex = anthro$sex, male = "male", female = "female",
  ref = kro.ref,
  item = "height",
  type = "SDS")

anthro$bmi <- anthro$weight/(anthro$height**2) * 10000
anthro$bmi_perc <- sds(anthro$bmi,
  age = anthro$age,
  sex = anthro$sex, male = "male", female = "female",
  ref = kro.ref,
  item = "bmi",
  type = "perc")

data(who.ref)
x <- data.frame(height=c(50,100,60,54),
  sex=c("m","f","f","m"),
  age=c(0,2.9,0.6,0.2))
sds(value = x$height, age = x$age, sex = x$sex, male = "m", female = "f",
  ref = who.ref, item = "height")
```

sds2d

Calculate SDS Values for 2-dimensional matrix of covariates

Description

Calculate SDS values for 2-dimensional matrix of covariates

Usage

```
sds2d(
  value,
  age,
  x2,
  sex,
  item,
```

```
    ref,  
    type = "SDS",  
    male = "male",  
    female = "female"  
  )
```

Arguments

value	vector of measurement values
age	vector of age values
x2	second vector of covariates
sex	vector of sex
item	name of the item e.g. "height"
ref	RefGroup object
type	"SDS" or "perc"
male	coding of sex for male
female	coding of sex for male

Details

The function takes a vector of measurement values, and of age and a second covariate (like age and height for blood pressure) of sex and a RefGroup object as arguments. It calculates the sds or percentile values. This function is beta.

the function searches for the nearest given point in the reference grid. From there, the SDS/percentile value will be calculated. Different from [sds](#), no interpolation will be applied. The procedure is according to Neuhauser et al. Blood Pressure Percentiles by Age and Height from Nonoverweight Children and Adolescents in Germany. 2011.

Value

vector containing SDS or percentile values

Author(s)

Mandy Vogel

sdsold

Calculate SDS Values

Description

Calculate SDS values - old version for comparison

Usage

```
sdsold(
  value,
  age,
  sex,
  item,
  ref,
  type = "SDS",
  male = "male",
  female = "female"
)
```

Arguments

value	vector of measurement values
age	vector of age values
sex	vector of sex
item	name of the item e.g. "height"
ref	RefGroup object
type	"SDS" or "perc"
male	coding of sex for male
female	coding of sex for female

Details

The function takes a vector of measurement values, and of age and of sex and a RefGroup object as arguments. It calculates the sds or percentile values.

Value

vector containing SDS or percentile values

Author(s)

Mandy Vogel

Examples

```
anthro <- data.frame(age = c(11.61,12.49,9.5,10.42,8.42,10.75,9.57,10.48),
  height = c(148.2,154.4,141.6,145.3,146,140.9,145.5,150),
  sex = sample(c("male","female"), size = 8, replace = TRUE),
  weight = c(69.5,72.65,47.3,51.6,45.6,48.9,53.5,58.5))
anthro$height_sds <- sds(anthro$height,
  age = anthro$age,
  sex = anthro$sex, male = "male", female = "female",
  ref = kro.ref,
  item = "height",
  type = "SDS")
```

```

anthro$bmi <- anthro$weight/(anthro$height**2) * 10000
anthro$bmi_perc <- sds(anthro$bmi,
                      age = anthro$age,
                      sex = anthro$sex, male = "male", female = "female",
                      ref = kro.ref,
                      item = "bmi",
                      type = "perc")
data(who.ref)
x <- data.frame(height=c(50,100,60,54),
                sex=c("m","f","f","m"),
                age=c(0,2.9,0.6,0.2))
sds(value = x$height, age = x$age, sex = x$sex, male = "m", female = "f",
    ref = who.ref, item = "height")

```

sds_2d

*Calculate SDS Values for 2-dimensional matrix of covariates***Description**

Calculate SDS values for 2-dimensional matrix of covariates – old version

Usage

```

sds_2d(
  value,
  age,
  x2,
  sex,
  item,
  ref,
  type = "SDS",
  male = "male",
  female = "female"
)

```

Arguments

value	vector of measurement values
age	vector of age values
x2	second vector of covariates
sex	vector of sex
item	name of the item e.g. "height"
ref	RefGroup object
type	"SDS" or "perc"
male	coding of sex for male
female	coding of sex for male

Details

The function takes a vector of measurement values, and of age and a second covariate (like age and height for blood pressure) of sex and a RefGroup object as arguments. It calculates the sds or percentile values. This function is beta.

the function searches for the nearest given point in the reference grid. From there, the SDS/percentile value will be calculated. Different from [sds](#), no interpolation will be applied. The procedure is according to Neuhauser et al. Blood Pressure Percentiles by Age and Height from Nonoverweight Children and Adolescents in Germany. 2011.

Value

sds_pub	<i>Calculate SDS Values</i>
---------	-----------------------------

Description

Calculate SDS values depending on the Tanner stage

Usage

```
sds_pub(  
  value,  
  pubstatus,  
  sex,  
  item,  
  ref,  
  type = "SDS",  
  male = "male",  
  female = "female"  
)
```

Arguments

value	vector of measurement values
pubstatus	vector of Tanner stages coded 1 to 5
sex	vector of sex
item	name of the item e.g. "height"
ref	RefGroup object
type	"SDS" or "perc"
male	coding of sex for male
female	coding of sex for female

Details

The function takes a vector of measurement values, and of tanner stage and of sex and a RefGroup object as arguments. It calculates the sds or percentile values.

Value

vector containing SDS or percentile values

Author(s)

Mandy Vogel

sds_pub2d	<i>Calculate SDS Values</i>
-----------	-----------------------------

Description

Calculate SDS values depending on the Tanner stage and a second variable

Usage

```
sds_pub2d(  
  value,  
  pubstat,  
  x2,  
  sex,  
  item,  
  ref,  
  type = "SDS",  
  male = "male",  
  female = "female",  
  age = NULL,  
  id = 1:length(value)  
)
```

Arguments

value	vector of measurement values
pubstat	vector of Tanner stages coded 1 to 5
x2	2nd predictor (vector), e.g. bmisds must be contained in reference
sex	vector of sex
item	name of the item e.g. "height"
ref	RefGroup object
type	"SDS" or "perc"
male	coding of sex for male

female	coding of sex for female
age	not used yet
id	order of values

Details

The function takes a vector of measurement values, and of tanner stage of a second variable (x2) and of sex and a RefGroup object as arguments. It calculates the sds or percentile values.

Value

vector containing SDS or percentile values

Author(s)

Mandy Vogel

select_fams	<i>select families</i>
-------------	------------------------

Description

Select groups (families)

Usage

```
select_fams(data, prop = 0.75, group, verbose = F)
```

Arguments

data	dataframe as returned by prepare data
prop	proportion of families to be sampled
group	name of the group variable (character) if not "group", ignored
verbose	if TRUE information about sample size is printed out

Details

function selects a given proportion of groups/families from the data if no grouping variable is given the original data set is returned function is called inside [do_iterations](#) and may not called directly

Value

dataframe containing only prop.fam percent the families in data

Author(s)

Mandy Vogel

select_meas	<i>choose one measurement per subject</i>
-------------	---

Description

Choose one measurement per subject

Usage

```
select_meas(data, subject = "subject", prop = 1, verbose = F)
```

Arguments

data	dataframe as returned by prepare data
subject	name of the column containing the subject identifier
prop	optional - proportion of measurements to sample
verbose	if TRUE information about sample size is printed out

Details

function samples one measurement per subject, if prop < 1 additional a prop*100 percent will be sampled from the measurements the function is called inside [do_iterations](#) and may not called directly

Value

dataframe containing the sampled rows

Author(s)

Mandy Vogel

show, ParTab-method	<i>class ParTab</i>
---------------------	---------------------

Description

show method for ParTab

Usage

```
## S4 method for signature 'ParTab'
show(object)
```

Arguments

object object of calss ParTab

Details

show method for ParTab

Value

print information about the respective reference table

Author(s)

Mandy Vogel

show,RefGroup-method	<i>class RefGroup</i>
----------------------	-----------------------

Description

show method for RefGroup

Usage

```
## S4 method for signature 'RefGroup'
show(object)
```

Arguments

object object of class RefGroup

Details

show method for RefGroup

Value

prints information about age range, citations, etc.

wormplot2d_gg*Worm Plot ggplot version*

Description

Worm plot ggplot version, 2 covariates

Usage

```
wormplot2d_gg(  
  m = NULL,  
  residuals = NULL,  
  age = NA,  
  x2 = NA,  
  name.x2,  
  n.inter.age = 1,  
  n.inter.x2 = 1,  
  y.limits = c(-1, 1)  
)
```

Arguments

m	a gamlss model
residuals	normalized quantile residuals
age	numeric vector of ages
x2	numeric vector of second covariate
name.x2	name of x2 for use in graphics
n.inter.age	number of age intervals or cut points
n.inter.x2	number of x2 intervals or cut points
y.limits	limits of the y-axis

Details

creates a wormplot for a gamlss model or a given vector of normalized quantile residuals, either for all residuals or grouped by age intervals

Value

ggplot object

wormplot_gg	<i>Worm Plot ggplot version</i>
-------------	---------------------------------

Description

Worm plot ggplot version

  m = NULL,  
  residuals = NULL,  
  age = NA,  
  n.inter = 1,  
  y.limits = c(-1, 1)  
)
```

Arguments

m	a gamlss model
residuals	nlormalized quantile residuals
age	numeric vector of ages
n.inter	number of age intervals or cut points
y.limits	limits of the y-axis

Details

creates a wormplot for a gamlss model or a given vector of normalized quantile residuals, either for all residuals or grouped by age intervals

Value

ggplot object
