

Package ‘cptcity’

July 22, 2025

Type Package

Title 'cpt-city' Colour Gradients

Version 1.1.1

Description Incorporates colour gradients from the 'cpt-city' web archive available at <<http://seaviewsensing.com/pub/cpt-city/>>.

Depends R (>= 3.5.0)

Imports grDevices

License GPL-3

URL <https://github.com/ibarraespinosa/cptcity>

BugReports <https://github.com/ibarraespinosa/cptcity/issues/>

Encoding UTF-8

LazyData true

RoxygenNote 7.3.2

Suggests covr, testthat

cpt

*Function to return colour palettes functions from 'cpt-city'***Description**

This function return a collor palette based on the name or position of the palette.

Usage

```
cpt(
  pal = "mpl_inferno",
  n = 100,
  colorRampPalette = FALSE,
  rev = FALSE,
  frgb = rep(1, 3)
)
```

Arguments

pal	Palette of colors available or the number of the position
n	integer; number of colors
colorRampPalette	Logical; to be used in sf and mapview.
rev	Logical; to internally revert order of rgb color vectors.
frgb	Numeric; vector of 3 to change internal rgb composition. The order is red, green, blue

Details

The cpt-city web archive comes from: <http://seaviewsensing.com/pub/cpt-city/>

Value

A colour palette function.

Examples

```
{
library(cptcity)
image(matrix(1:100), col = cpt(pal = "mpl_inferno"))
find_cpt("temperature")
image(matrix(1:100), col = cpt("idv_temperature"))
image(matrix(1:100), col = cpt("idv_temperature", rev = TRUE))
## Not run:
# Do not run
library(ggplot2)
```

```
ggplot(faithfuld, aes(waiting, eruptions)) +
  geom_raster(aes(fill = density))

ggplot(faithfuld, aes(waiting, eruptions)) +
  geom_raster(aes(fill = density)) +
  scale_fill_gradientn(colours = cpt(n = 100))

## End(Not run)
}
```

cptcity

A package to return colour gradients from CPTCITY

Description

Colour palettes comes from <http://soliton.vm.bytemark.co.uk/pub/cpt-city/index.html> Rhw function `cpt` has two arguments **n** for the numbers and **pal** for the name or number of the palette:

Details

The palettes are available here: <http://soliton.vm.bytemark.co.uk/pub/cpt-city/index.html>

Author(s)

Maintainer: Sergio Ibarra-Espinosa <zergioibarra@gmail.com> ([ORCID](#))

cpt_names

Names of the 7140 color gradients of cptcity R Package

Description

This dataset os a vector with al the names of the gradients of the archive cptcity (<http://seaviewsensing.com/pub/cpt-city/>) availale in this package. Please, read the documentation of each color gradient in the web page shown above.

Usage

```
data(cpt_names)
```

Format

A vector with the 7140 names of the color gradients

Source

<http://seaviewsensing.com/pub/cpt-city/>

find_cpt	<i>Function to return colour palettes names</i>
----------	---

Description

`find_cpt` returns the name of the colour gradient that satisfy the search. It is a searcher. It is a mini mini google.

Usage

```
find_cpt(name)
```

Arguments

name character; Word to be searched among the names of the cpt gradients.

Value

names that satisfy the search.

Note

This functions runs `grep`.

Examples

```
{
library(cptcity)
find_cpt("temperature")
image(matrix(1:100), col = cpt("idv_temperature"))
## Not run:
library(cptcity)
# Do not run
# data names_cpt lazy loaded, already in environment
library(ggplot2)
ggplot(faithfuld, aes(waiting, eruptions)) +
  geom_raster(aes(fill = density))

find_cpt("radar")
ggplot(faithfuld, aes(waiting, eruptions)) +
  geom_raster(aes(fill = density)) +
  scale_fill_gradientn(colours = cpt(n = 10, "ncl_radar"))
```

```

find_cpt("rain")
ggplot(faithfuld, aes(waiting, eruptions)) +
  geom_raster(aes(fill = density)) +
  scale_fill_gradientn(colours = cpt(pal = "pj_1_a_rainbow"))

## End(Not run)
}

```

lucky

Random colour gradient!

Description

Based on "I'm Feeling Lucky" from Google. As this package includes 7140 colour gradients, it might be hard to find the 'right'

Usage

```

lucky(
  n = 100,
  colorRampPalette = FALSE,
  rev = FALSE,
  message = TRUE,
  nseed,
  frgb = rep(1, 3)
)

```

Arguments

n	integer; number of colors
colorRampPalette	Logical; to be used in sf and mapview.
rev	Logical; to internally revert order of rgb color vectors.
message	Logical; for printing or not the name of the colour gradient
nseed	integer; for reproducing the same colour gradient. See set.seed
frgb	Numeric; vector of 3 to change internal rgb composition The order is red, green, blue

Details

The cpt-city web archive comes from: <http://soliton.vm.bytemark.co.uk/pub/cpt-city/index.html>

Value

A RANDOM colour palette function including name of the colour gradient and number.

Examples

```
{
  library(cptcity)
  image(matrix(1:100), col = lucky())
  image(matrix(1:100), col = lucky())
  image(matrix(1:100), col = lucky())
  image(matrix(1:100), col = lucky())
  image(matrix(1:100), col = lucky())
  image(matrix(1:100), col = lucky(rev = TRUE))
  image(matrix(1:100), col = lucky(nseed = 1))
}
```

show_cpt

Show me some colors!

Description

`show_cpt` returns a color matrix which prints and show the colors

Usage

```
show_cpt(x, label = TRUE)
```

Arguments

<code>x</code>	character; names of the cpt gradients.
<code>label</code>	Logical, to show labels or not.

Value

names color matrix

Examples

```
{
  library(cptcity)
  show_cpt(find_cpt("radar"))
}
```
