

Package ‘datasauRus’

July 22, 2025

Title Datasets from the Datasaurus Dozen

Version 0.1.9

Description The Datasaurus Dozen is a set of datasets with the same summary statistics. They retain the same summary statistics despite having radically different distributions. The datasets represent a larger and quirkier object lesson that is typically taught via Anscombe's Quartet (available in the 'datasets' package). Anscombe's Quartet contains four very different distributions with the same summary statistics and as such highlights the value of visualisation in understanding data, over and above summary statistics. As well as being an engaging variant on the Quartet, the data is generated in a novel way. The simulated annealing process used to derive datasets from the original Datasaurus is detailed in ``Same Stats, Different Graphs: Generating Datasets with Varied Appearance and Identical Statistics through Simulated Annealing" <doi:10.1145/3025453.3025912>.

box_plots	<i>Box plot data</i>
-----------	----------------------

Description

This dataset is the box plot data produced by Matjeka & Fitzmaurice to demonstrate applicability of their process.

Usage

box_plots

Format

A data frame with 2484 rows and 5 variables:

- **left:** data pulled to the left
- **lines:** data with arbitrary spikes along a range
- **normal:** normally distributed data
- **right:** data pulled to the right
- **split:** split data

}
```

Description

This dataset is the box plot data produced by Matjeka & Fitzmaurice to demonstrate applicability of their process.

Usage

```
box_plots_long
```

Format

A data frame with 12420 rows and 2 variables:

- **Plot:** either the left, lines, normal, right or split boxplot
- **Values:** the corresponding values from each dataset

datasaurus_dozen	<i>Datasaurus Dozen data</i>
------------------	------------------------------

Description

A dataset demonstrating the utility of visualization. These 12 datasets are equal in standard measures: mean, standard deviation, and Pearson's correlation.

Usage

```
datasaurus_dozen
```

Format

A data frame with 1846 rows and 3 variables:

- **dataset:** indicates which dataset the data are from
- **x:** x-values
- **y:** y-values

References

datasaurus_dozen_wide *Datasaurus Dozen (wide) data*

Description

A dataset demonstrating the utility of visualization. These 12 datasets are equal in standard measures: mean, standard deviation, and Pearson's correlation.

Usage

```
datasaurus_dozen_wide
```

Format

A data frame with 142 rows and 26 variables:

- **away_x**: x-values for the away dataset
- **away_y**: y-values for the away dataset
- **bullseye_x**: x-values for the bullseye dataset
- **bullseye_y**: y-values for the bullseye dataset
- **circle_x**: x-values for the circle dataset
- **circle_y**: y-values for the circle dataset
- **dino_x**: x-values for dinosaur dataset!
- **dino_y**: y-values for dinosaur dataset!
- **dots_x**: x-values for the dots dataset
- **dots_y**: y-values for the dots dataset
- **h_lines_x**: x-values for the h_lines dataset

- **h_lines_y**: y-values for the h_lines dataset
- **high_lines_x**: x-values for the high_lines dataset
- **high_lines_y**: y-values for the high_lines dataset
- **slant_down_x**: x-values for the slant_down dataset
- **slant_down_y**: y-values for the slant_down dataset
- **slant_up_x**: x-values for the slant_up dataset
- **slant_up_y**: y-values for the slant_up dataset
- **star_x**: x-values for the star dataset
- **star_y**: y-values for the star dataset
- **v_lines_x**: x-values for the v_lines dataset
- **v_lines_y**: y-values for the v_lines dataset
- **wide_lines_x**: x-values for the wide_lines dataset
- **wide_lines_y**: y-values for the wide_lines dataset
- **x_shape_x**: x-values for the x_shape dataset
- **x_shape_y**: y-values for the x_shape dataset

simpsons_paradox	<i>Simpsons Paradox data</i>
------------------	------------------------------

Description

A dataset demonstrating Simpson's Paradox with a strongly positively correlated dataset (simpson_1) and a dataset with the same positive correlation as simpson_1, but where individual groups have a strong negative correlation (simpson_2).

Usage

```
simpsons_paradox
```

Format

A data frame with 444 rows and 3 variables:

- **dataset:** indicates which of the two datasets the data are from, simpson_1 or simpson_2
- **x:** x-values
- **y:** y-values

References

}
```

```

    title(paste0("Simpson\'s Paradox ", i))
  }

  par(state)

```

simpsons_paradox_wide *Simpsons Paradox (wide) data*

Description

A dataset demonstrating Simpson's Paradox with a strongly positively correlated dataset (simpson_1) and a dataset with the same positive correlation as simpson_1, but where individual groups have a strong negative correlation (simpson_2).

Usage

```
simpsons_paradox_wide
```

Format

A data frame with 222 rows and 4 variables:

- **simpson_1_x**: x-values from the simpson_1 dataset
- **simpson_1_y**: y-values from the simpson_1 dataset
- **simpson_2_x**: x-values from the simpson_2 dataset
- **simpson_2_y**: y-values from the simpson_2 dataset

twelve_from_slant_alternate_wide

Twelve From Slant Alternate (wide) data

Description

A dataset demonstrating the utility of visualization. These 12 datasets are equal in non-parametric measures: median, interquartile range, and Spearman's rank correlation.

Usage

```
twelve_from_slant_alternate_wide
```

Format

A data frame with 182 rows and 24 variables:

- **bullseye_x**: x-values for the bullseye dataset
- **bullseye_y**: y-values for the bullseye dataset
- **circle_x**: x-values for the circle dataset
- **circle_y**: y-values for the circle dataset
- **dots_x**: x-values for the dots dataset
- **dots_y**: y-values for the dots dataset
- **h_lines_x**: x-values for the h_lines dataset
- **h_lines_y**: y-values for the h_lines dataset
- **high_lines_x**: x-values for the high_lines dataset
- **high_lines_y**: y-values for the high_lines dataset
- **slant_x**: x-values for the slant dataset
- **slant_y**: y-values for the slant dataset
- **slant_down_x**: x-values for the slant_down dataset
- **slant_down_y**: y-values for the slant_down dataset
- **slant_up_x**: x-values for the slant_up dataset
- **slant_up_y**: y-values for the slant_up dataset
- **star_x**: x-values for the star dataset

- **star_y**: y-values for the star dataset
- **v_lines_x**: x-values for the v_lines dataset
- **v_lines_y**: y-values for the v_lines dataset
- **wide_lines_x**: x-values for the wide_lines dataset
- **wide_lines_y**: y-values for the wide_lines dataset
- **x_shape_x**: x-values for the x_shape dataset
